SOFTWARE ENGINEER – ANALYST, ONBOARDING TEAM

Dear hiring team,

I am applying for the Software Engineer – Analyst position in the Onboarding team. It appeals to me because it combines the two things I enjoy most: getting to the real need, and designing a solution that can be maintained for years. Client onboarding is also a process where the quality of the analysis shows directly in whether the client makes it to the end.

Over more than ten years in software I have moved from frontend work to the whole solution. Since February 2026 I design and build Seeder for the National Library of the Czech Republic: a production system on Django and PostgreSQL where curators come to me with a need and I turn it into a data model, workflows, implementation and deployment. Until April 2026 I led frontend engineering at BlueGhost, and before that, at eMan, I built the Moje MND customer portal and process applications for E.ON, exactly the kind of work where a business brief has to be translated into forms, validation, API contracts and process states.

My analytical habit did not start in engineering. I spent three years selling CRM/ERP and ICT services, so I know how a requirement sounds when a customer says it and how it differs from what they actually need. Since then I have sat on the other side of the table and made a habit of writing specifications, decision records and documentation that a team can take over without me.

I am open about where I stand on your requirements. REST, Git, CI/CD, SQL and Python are part of my daily work. I have not yet used Kafka or SOAP on a production project; I understand the principles of messaging and integration, and I treat picking up a specific technology as part of the first weeks, not an obstacle. The identity and onboarding domain is new to me, and that is part of the attraction: it is regulated, it has clear consequences for the client, and it rewards careful analysis.

I would welcome the chance to show how I approach the analysis of a specific onboarding step, on a case of your choosing. My CV is attached; my portfolio and contact details are at codeguy.cz.

Kind regards,

Karel Kutchan
